Qiang Xu

qiangx@nvidia.com | https://qiangxu1996.github.io | Santa Clara, CA 95051

I enjoy building systems that unlock the full potential of the underlying hardware resources. I am experienced in the development, profiling, and optimization of **machine learning systems** for both distributed GPU servers and computationally constrained mobile devices.

Education

Purdue University — *West Lafayette, USA*
Ph.D. in Electrical and Computer Engineering — *2018 – 2024*

University of Science and Technology of China (USTC) — *Hefei, China*
B.E. in Computer Science and Technology — *2014 – 2018*
Talent Program in Computer Science and Technology, School of the Gifted Young

Skills

Programming	Python, C/C++, CUDA, CUTLASS/CuTe DSL, Bash
Platforms	GPU, Linux, Android, Docker, HPC, Cloud computing
Frameworks	PyTorch, TensorRT-LLM, TensorRT, vLLM, JAX, Mobile DL frameworks
Tools	Git, (cuda-)gdb, Nsight Compute, Nsight Systems, Linux perf

Professional Experience

Nvidia Corporation — *Santa Clara, USA*
Developer Technology Engineer — *Jun. 2024 – Present*

- Optimized the KDA linear attention kernel, achieving up to 4.1x speedup over Kimi's FlashKDA implementation.
- Designed and implemented module-level kernel fusion and optimization for recommendation systems, improving module performance by 2.4x over Triton implementations.
- Designed and built an LLM inference scheduler utilizing GPU spatial partitioning, which improved inference throughput by up to 43% under the same latency constraint.

Purdue University — *West Lafayette, USA*
Graduate Research Assistant — *Aug. 2018 – May 2024*

- Designed a machine learning inference framework for heterogeneous GPU clusters exploiting pipeline parallelism, improving GPU utilization and inference throughput by up to 52.8%. (**USENIX ATC 2025**)
- Developed a machine-learning-as-a-service framework serving augmented reality clients. The framework maximizes the capacity of a GPU server and supports 1.7x–6.9x more clients concurrently. (**MobiSys 2024**)
- Built the first scheduling framework for augmented reality clients that require offloading multiple machine learning tasks. Improved the overall accuracy by 7.6%–14.3%. (**MobiCom 2023**)
- Characterized the performance of offloading object detection tasks over 5G mmWave in the wild in collaboration with wireless networking research teams. (**MASCOTS 2023**, **5G-MeMU 2022**)
- Surveyed 25 mobile app developers for their practices on deep parameters and energy optimization. Systematically studied and categorized the energy impact of deep parameters in 16 Android apps. (**SANER 2022**)
- Contributed to the design of an energy-aware adaptive bitrate algorithm for video streaming. (**USENIX ATC 2021**)

NEC Laboratories America, Inc. — *Princeton, USA*
Research Intern — *May 2023 – Aug. 2023*

- Designed an offloading scheduler to coordinate DNN-powered video analytics clients under network contention. Reduced the request drop rate by up to 92.9% and improved application responsiveness. (**PeRConAI 2025**)

   2025

Professional Services

Program Committee Member, MobiCom 2027
Program Committee Member, MobiSys 2026
Conference Reviewer, WWW 2027
Journal Reviewer, IEEE Transactions on Mobile Computing
Journal Reviewer, IEEE Transactions on Networking

Teaching

Teaching Assistant, Introduction to Operating Systems (ECE 695), Purdue University *2020 – 2023*

Honors and Awards

Ross Fellowship, Purdue University *2018*
National Scholarship (top 0.2% nationwide), USTC *2016*
Outstanding Student Scholarship, USTC *2015*
Outstanding Freshman Scholarship, USTC *2014*
